Topic Idea:

Phishing GU students

What we will be doing:

- Creating a phishing link/QR code that leads to a fake GU login page.
- If students try to log in, they'll be redirected to a page (could be a warning, survey, or error message).
- No credentials will be collected—just tracking who falls for it.
- Reporting results to IT to improve security awareness.
- Sending a fake "password leak" email to test responses.
 - Also putting up fliers with QR persuading password changes
-

What are our goals:

- See how many students fall for phishing.
- Teach students how to spot phishing sources.
- Help GU ITS improve security.
- Raise overall awareness of cyber threats.

Tech/tools planning on using:

- Website cloning tools for the fake login page.
- QR code generator for easy phishing link access.
- Email campaign to test social engineering responses.
- Analytics tools to track engagement.
